

# INTERNET SERVICES

INTERNET CAFÉS & WIFI

**BE IN THE MIDDLE  
OF NOWHERE.**

**AND AT THE CENTER  
OF EVERYTHING.™**

Internet services from SeaMobile® provide access to people, information and entertainment even in the world's most remote locations at sea. Internet connectivity is available in Internet Cafés or where WiFi is available throughout the vessel.

Internet users can access these services via personal computers or hardware provided in Internet Cafés to access email, search engines, Google® maps, weather and more.

## INTERNET CAFÉS & WIFI SERVICES

Over 150 SeaMobile Internet Cafés are operating today on offshore energy vessels, commercial ships, ferries, and most cruise ships. With our turn-key design, we can provide the hardware, software, and onboard technical support to create and manage the Internet Café.

If Internet users prefer WiFi access, we have their needs covered as well with WiFi access in designated areas of the vessel.

Like all services from SeaMobile, our MTN Satellite Services division provides the global VSAT satellite communications network for data transmission with all necessary firewalls and security. Filtering of web sites and content is also available based on customer requests. Our VSAT network is "Always On - Always Available" anywhere in the world.

And with SeaMobile's billing and payment options, prepaid cards and credit card billing make it easier than ever for your crew members to stay connected.

## ENHANCED SERVICES

The SeaMobile Internet experience gives people at sea easy access to an infinite amount of information such as:

- Email
- Popular search engines like Google®
- Weather and maps

Internet services from SeaMobile puts people at the center of everything, even in the middle of nowhere.
